- ✧ **"Accompanying citizen of persons with traumatic brain injury in a community integration project: An exploration of the role."**  
Therriault, P.-Y., H. Lefebvre, A. Guindon, M.-J. Levert and C. Briand (2016).  
Work(Preprint): 1-10  
**Accès:** <http://dx.doi.org/10.3233/WOR-162342>  
**Résumé:** BACKGROUND: The APIC (Citizen Accompaniment Project for Community Integration) is an innovative program that seeks to increase the community integration of people with a traumatic brain injury (TBI) by offering the support of an accompanying citizen (AC) in the accomplishment of significant life activities. OBJECTIVE: This article aims to better define the AC's role in this process, by underlining the mental health risks they face, the strategies they use, and the impacts the role has on their own lives. METHODS: This qualitative study is based on the analysis of interviews conducted with the AC following the first year of implementation. The data is part of a larger project aimed at the implementation and evaluation of APIC program. The data were analysed according to the rules of thematic content analysis, which encourages grouping main ideas into categories. This is an iterative process allowing for the constant emergence of new categories during the analysis. RESULTS: Accompaniment is full of joys and positive moments for the AC and participants. However, some difficult situations are encountered and the AC are constantly faced with challenges and constraints. The emerging study themes are as follows: the environment, the characteristics of the person accompanied, the AC's personal limits, and the ambiguities in the accompanier-accompanied relationship. CONCLUSIONS: Five principles drawn from the results will help oversee this practice more efficiently and limit the mental health risks of accompaniers. These findings may permit further development of this type of program for people living with disabilities.
  
- ✧ **"Application of a Global Environmental Equity Index in Montreal: Diagnostic and Further Implications."**  
Carrier, M., P. Apparicio, Y. Kestens, A.-M. Séguin, H. Pham, D. Crouse and J. Siemiatycki (2016).  
Annals of the American Association of Geographers: 1-18  
**Accès:** <http://dx.doi.org/10.1080/24694452.2016.1197766>  
**Résumé:** Urban living environments are known to influence human well-being and health. The literature on environmental equity focuses especially on the distribution of nuisances and resources, which, because of the unequal spatial distribution of different social groups, leads to an increased exposure to risks or to less access to beneficial elements for certain populations. Little work has been done on the multidimensionality of different environmental burdens and the lack of resources in some urban environments. This article has two main objectives. The first objective is to construct an environmental equity index that takes into consideration seven components of the urban environment (traffic-related pollutants, proximity to major roads and highways, vegetation, access to parks, access to supermarkets, and the urban heat island effect). The second objective is to determine whether groups vulnerable to different nuisances --namely, individuals under fifteen years old and the elderly -- and those who tend to be located in the most problematic areas according to the environmental justice literature (i.e., visible minorities and low-income populations) are affected by environmental inequities associated with the application of the composite index at the city block level. The results obtained by using four statistical techniques show that, on the Island of Montreal, low-income persons and, to a lesser extent, visible minorities are more frequently located in city blocks close to major roads and with higher concentrations of NO<sub>2</sub> and less vegetation. Finally, the

environmental equity index is significantly lower in areas with high concentrations of low-income populations in comparison with the wealthiest areas.

- ✧ **"At the Edges of Meaning: Aging, Memory, and Resonant Listening."**  
Sawchuk, K. and A. Moorhouse (2016).  
Modern Drama 59(2): 177-192  
**Accès:** <http://dx.doi.org/10.3138/md.59.2.3>  
**Résumé:** This article explores the idea of resonant listening in relation to aging and memory loss. Resonance is put into conversation with three pieces of sound art created by or with older adults grappling with changes in memory. The first two works discussed, Sounds of Forgetting and Turning, were created from recordings of conversations between one of the authors, Aynsley Moorhouse, and her father, Dr. John Moorhouse. The third composition, Fried Brains, is a two-minute piece created by Louise Jacks and Enid Anderson, two older women. Shifting away from narratives that reduce aging and memory changes to a series of tragic losses from a golden time in one's life, these three works assert the value of ongoing expressive capacity and collaboration. They point to the ways in which, through sound, we may gradually learn to destigmatize dementia and changes in memory to create connections between neurotypical and neurologically atypical people.
  
- ✧ **"Compassionate Canadians and conflictual Americans? Portrayals of ageism in liberal and conservative media."**  
Marier, P. and M. Revelli (2016).  
Ageing & Society **FirstView**: 1-22  
**Accès:** <http://dx.doi.org/10.1017/S0144686X16000544>  
**Résumé:** ABSTRACT Building upon earlier studies on ageism in the media and the polarised ageism framework, this contribution compares the prevalence of three forms of ageism – intergenerational, compassionate and new ageism – in four Canadian and American newspapers. The analysis has three objectives. First, it adapts the polarised ageism framework to a comparative case study to assess its usefulness beyond Canada. Second, it analyses which form of ageism occurs more frequently in the coverage of ageing-related stories in Canadian or American newspapers. Third, it studies the importance of the political orientation of news media across both countries by comparing the portrayal of ageing-related stories in conservative and liberal newspapers. Core findings include the presence of a stronger focus on intergenerational ageism in American and conservative newspapers and more frequent prevalence of compassionate ageism in Canada and liberal newspapers. American newspapers also typically employ more pejorative and sensational language.
  
- ✧ **"Driving with advanced vehicle technology: A qualitative investigation of older drivers' perceptions and motivations for use."**  
Gish, J., B. Vrkljan, A. Grenier and B. Van Miltenburg (2016).  
Accident Analysis & Prevention  
**Accès:** <http://dx.doi.org/10.1016/j.aap.2016.06.027> (Epub ahead of print)  
**Résumé:** For older drivers, in-vehicle technology offers much potential to improve safety and increase longevity of retaining both licensure and community mobility. However, little is known about how older drivers perceive Advanced Vehicle Technologies (AVTs) based on everyday driving experience. Interviews with 35 older drivers (20 men; 15 women) aged 60–85 who owned a vehicle with at least two AVTs (e.g., back-up camera, lane departure warning) were conducted to explore the meanings that older drivers assigned to AVTs and motivations for use, including whether age-related functional changes were part of their automobile purchase decision. Findings indicate that age-related changes are not a primary reason for why older adults seek out AVTs, but they still perceived and experienced AVTs to counteract age-related changes in driving performance based upon changes they felt occurring within the body. Older drivers also described AVTs as generating a sense of comfort behind-the-wheel. Comfort with

this technology was equated with convenience, ease of use, and increased feelings of safety. Discussion emphasizes how assessments of the quality of driving performance and value of technology occur in relation to an aging body.

- ※ **"Gendered depression: Vulnerability or exposure to work and family stressors?"**  
Marchand, A., J. Bilodeau, A. Demers, N. Beauregard, P. Durand and V. Y. Haines lii (2016).  
Social Science & Medicine **166**: 160-168  
**Accès:** <http://dx.doi.org/10.1016/j.socscimed.2016.08.021>  
**Résumé:** AbstractObjective Research has shown that employed women are more prone to depression than men, but the pathways linking gender to depression remain poorly understood. The aim of this study was to examine how work and family conditions operated as potentially gendered antecedents of depression. It evaluated more specifically how differences in depressive symptoms in women and men could be explained by their differential vulnerability and exposure to work and family conditions, as well as by the mediating role of work-to-family conflict (WFC) and family-to-work conflict (FWC). Methods Data were collected in 2009–2012 from a sample of 1935 employees (48.9% women) nested in 63 workplaces in the province of Quebec (Canada). Data were analyzed with multilevel path analysis models to test for the differential exposure hypothesis, and stratified by gender to test for the differential vulnerability hypothesis. Results Results supported both hypothesizes, but only WFC played a mediating role between work-family stressors and depression. Regarding the vulnerability hypothesis, WFC was more strongly associated with women depressive symptoms, and the magnitude of the association between family income and WFC was stronger for women. Overall, the differential exposure hypothesis seemed to reach a greater empirical support. After accounting for work and family stressors as well as WFC, differences in depressive symptoms in women and men were no longer significantly, as WFC, working hours, irregular work schedule and skill utilization acted as mediators. WFC associated with higher depressive symptoms and skill utilization with lower depressive symptoms. WFC related to higher working hours and irregular work schedule. Compared to men, women reported higher WFC, but lower working hours, less irregular work schedule and lower skill utilization at work. Conclusion Women's higher rate of depression is intrinsically linked to their different social experiences as shaped by a gendered social structure and gendered organizations.
  
- ※ **"Grannies on the Net: Grandmothers' Experiences of Facebook in Family Communication."**  
Ivan, L. and S. Hebblethwaite (2016).  
2016 **18**(1): 15  
**Accès:** <http://dx.doi.org/10.21018/rjcpr.2016.1.199>  
**Résumé:** Despite ageist stereotypes about older people's abilities to engage with information and communication technologies, grandparents are increasingly engaged with digital media. Grandmothers, in particular, are primarily responsible for using of web-based services to communicate with their children and grandchildren (Quadrello et al., 2005). Photos and news from children and grandchildren, especially grandbabies, act as important incentives for grandparents to go online. The purpose of the study, therefore, was to investigate how grandmothers use Facebook to facilitate family communication with children and grandchildren who move far away from home. Semi-structured interviews were conducted with grandmothers living in Romania and Canada, having a Facebook account and relevant family members (children or grandchildren) far from home. Three themes emerged from the data indicating: 1) the tendency to switch between different platforms to facilitate family communication; 2) the relative passive use of Facebook, focusing on photos and quotations as content that trigger emotions; 3) that Facebook usage is influenced by social norms around decency and privacy. Findings suggest that family relationships play a central role in grandmothers' motivations and behaviours surrounding Facebook use.

- ✧ **"Implementing a Systematic Screening Procedure for Older Adult Mistreatment Within Individual Clinical Supervision: Is It Feasible?"**  
Couture, M., S. Israël, M. Soulières and M. Sasseville (2016).  
Journal of Interpersonal Violence  
**Accès:** <http://dx.doi.org/10.1177/0886260516662851>  
**Résumé:** Home care professionals are well positioned to witness or prevent older adult mistreatment in the community. Screening efforts are important because most victims will not easily come forth. Two Canadian local community service centers implemented a systematic screening procedure within preexisting individual clinical supervision sessions to support social workers and improve detection of mistreatment. The aim of this pilot project was to assess fidelity, acceptability, and feasibility of the new procedure. Qualitative data was collected using individual interviews with two clinical supervisors, one focus group with eight social workers and content transcribed from 15 supervision sessions. It was estimated that 400 clients were screened for older adult mistreatment using this new procedure. Results showed the procedure was judged acceptable because it sensitized social workers to risk factors, gave them time to reflect upon and discuss probable cases with their clinical supervisor. Nonetheless, participants did not use the designated statistical code in the new procedure to document mistreatment situations. Feasibility was mainly challenged by the fact that screening for older adult mistreatment competes with other organizational priorities. Future initiatives must develop strategies to counteract those barriers.
  
- ✧ **"Introduction. Aging, Communication and Media Technologies."**  
Sawchuk, K. (2016).  
2016 18(1): 4  
**Accès:** <http://dx.doi.org/10.21018/rjcpr.2016.1.198>  
**Résumé:** What does it mean to age within “networked societies” (Castells, 2000)? What might be learned if we take the Internet and Communication Technology (ICT) and media experiences of older adults into account in our research? These questions are core to this special issue on Aging, Communication and Media Technologies . Comprised of six papers from authors working in five cultural contexts in Europe and North America, Aging, Communication and Media Technologies offers insights into demographic transformations towards ‘ageing societies’ in the industrialized world, changes in the media and technological landscape, and the variegated practices of communication in different cultural contexts.
  
- ✧ **"The Invisible Women: Gender and Caregiving in Francophone Newspapers."**  
Marier, P. and I. Van Pevenage (2016).  
2016 18(1): 12  
**Accès:** <http://dx.doi.org/10.21018/rjcpr.2016.1.203>  
**Résumé:** This contribution analyses the importance given to gender in articles related to caregiving for older adults in five francophone newspapers ( Le Soir, Le Devoir, Figaro, Libération and La Presse ) across three countries (Belgium, France and Canada). Out of the 254 articles in our sample, less than a fifth (49) made any mention of gender. A closer analysis of the gender related contributions reveal that only 18 articles devote more than a line to the interaction between gender and caregiving activities and its multiple socio-economic consequences. This is highly surprising since women provide the bulk of caregiving efforts and are the ones facing difficulties due to the lack of governmental actions to assist with these functions. These consequences are well documented in the scientific literature and feature caregiving burnout, loss of employment and economic insecurity. This contribution features an analysis and some extracts from the 18 articles in question.

**Résumé:** Editorial of a special focus volume of Musical Therapy Perspectives.
  
- ✘ **"Road traffic noise geography during the night in Montreal: An environmental equity assessment."**  
Carrier, M., P. Apparicio and A.-M. Séguin (2016).  
The Canadian Geographer / Le Géographe canadien: n/a-n/a  
**Accès:** <http://dx.doi.org/10.1111/cag.12281>  
**Résumé:** A high level of road traffic noise during the night can alter individuals' wellbeing. The first objective of this paper is to determine whether the groups that are most vulnerable to road traffic noise, namely children under 15 years old and people aged 65 and over, and the groups most likely to experience high levels of nuisance, namely visible minorities and low-income individuals, are affected by environmental inequities with regard to road traffic noise during the night. The second objective is to identify the sectors where the mean level of noise surpasses the 55 dB(A) tolerance threshold established by the World Health Organization. The methodology for estimating the level of nocturnal road traffic noise is based on a combination of elements of the road and urban environments. All of these parameters have been considered in calculating road traffic noise in the most densely inhabited portion of the Island of Montreal. The results of the statistical tests show that the groups selected on the basis of age are not affected by any environmental inequities. However, areas with more low-income individuals and visible minorities are more likely to be characterized by higher levels of road traffic noise when compared with the rest of the population.
  
- ✘ **"To Include or Not to Include Them? Realities, Challenges and Resistance to the Participation of People with Disabilities in Seniors' Organizations."**  
Raymond, E. and N. Lacroix (2016).  
Review of Disability Studies: An International Journal 12(2&3)  
**Accès:** <http://www.rds.hawaii.edu/ojs/index.php/journal/article/view/573>  
**Résumé:** People with disabilities are often excluded from mainstream seniors' organizations. A participatory action research project was undertaken in a seniors' leisure association to better include members with disabilities. Results underline the importance of understanding the interaction of individual and environmental factors when looking to support the participation of seniors with disabilities.
  
- ✘ **"Vivre à l'intersection du VIH et du vieillissement : quelles répercussions sur les liens sociaux significatifs?"**  
Wallach, I., X. Ducandas, M. Martel and R. Thomas (2016).  
Canadian Journal on Aging/La Revue canadienne du vieillissement 35(01): 42-54  
**Accès:** <http://dx.doi.org/10.1017/S0714980815000525>  
**Résumé:** ABSTRACT This research examines obstacles faced by older people living with HIV in maintaining their significant social ties (family, friends) in the light of a double theoretical framework, inter-sectionality and the course of life. Favoring a qualitative methodology, this research is based on in-depth, semi-directed interviews with a diverse sample of 38 people living with HIV, aged 50-73 years. Analysis reveals that a significant proportion of participants have experienced ruptures or deterioration of close ties with intimates at the level of family or friends. The principal factors behind these difficulties are the past and present stigma associated with HIV and /or other social positions, long-term effects of HIV, issues related to aging and crosscutting effects of HIV and aging. RÉSUMÉ La présente recherche se propose d'examiner les obstacles rencontrés par les personnes âgées vivant avec le VIH dans le

maintien de leurs liens sociaux significatifs (famille, amis) à la lumière d'un double cadre théorique, l'intersectionnalité et le parcours de vie. Privilégiant une méthodologie qualitative, cette recherche s'appuie sur des entrevues semi-directives approfondies réalisées avec un échantillon diversifié de 38 personnes vivant avec le VIH âgées de 50 à 73 ans. L'analyse des discours révèle qu'une proportion importante de participants ont vécu ou vivent des ruptures ou une détérioration des liens avec leurs proches au niveau familial et amical. Les principaux éléments à l'origine de ces difficultés sont la stigmatisation passée et présente du VIH et/ou d'autres positions sociales, les effets au long cours du passé avec le VIH, les enjeux reliés au vieillissement et les effets croisés du VIH et du vieillissement.

- ✧ **Croyances, intentions et obstacles chez les aînés québécois pour améliorer leur santé**  
Blanchet, C., D. Hamel and p. Institut national de santé publique du Québec. Bureau d'information et d'études en santé des (2016).  
Montréal, Institut national de santé publique du Québec.  
**Accès:** <http://www.santecom.qc.ca/Bibliothequevirtuelle/INSPQ/9782550760313.pdf>  
**Résumé:** Cette publication de l'Institut national de santé publique du Québec fait partie du second volet d'une série de publications axées sur le thème Vieillesse et santé. Les mesures préventives axées sur les habitudes de vie représentent une stratégie de choix pour éviter, retarder ou réduire l'apparition des maladies et ainsi prévenir la morbidité et la mortalité qui y sont associées. De plus, on parle aujourd'hui d'autogestion des maladies chroniques par les individus eux-mêmes, qu'ils soient âgés ou non, en misant sur leur participation dans la prise en charge de leur maladie (Fournier et Murphy, 2016; Berman et Iris, 1998; CCS, 2012). L'adoption de saines habitudes de vie même à un âge avancé fait ainsi partie des stratégies d'autogestion et de prévention des maladies chroniques et met de l'avant une perspective positive du vieillissement (Cardinal et al., 2008; Tourigny, 2013)

**Résumé:** (Extrait du site de l'OMS) "Aujourd'hui pour la première fois dans l'histoire, la majorité des populations peuvent espérer vivre jusqu'à 60 ans et au-delà. Combinée à une baisse marquée des taux de fécondité, cette augmentation de l'espérance de vie conduit à un vieillissement rapide des populations partout dans le monde. Il s'agit là d'un profond bouleversement et ses répercussions sont considérables.

Une action globale de santé publique en matière de vieillissement de la population est nécessaire de toute urgence. Cela nécessitera des changements fondamentaux, et pas uniquement dans ce que nous réalisons, mais dans la façon dont nous concevons le vieillissement lui-même.

Le Rapport mondial sur le vieillissement et la santé définit un cadre d'action pour favoriser le vieillissement en bonne santé, construit autour du nouveau concept des capacités fonctionnelles. Cela exigera une transformation des systèmes de santé s'éloignant des modèles curatifs basés sur la maladie pour préconiser la prestation de soins intégrés et centrés sur la personne âgée."

## Pratiques de pointe / Leading Practices

---

Les thématiques suivantes font l'objet d'une surveillance particulière visant à alimenter la réflexion des équipes des pratiques de pointe du CAU en gérontologie sociale œuvrant auprès ou avec des personnes âgées. Les articles signalés ont été publiés dans des revues révisées par les pairs.

We monitor the scientific literature related to the following leading practices in order to support the CAU's social gerontology teams working with or for older adults. All selected articles are published in peer-reviewed journals.

### **Maltraitance des personnes âgées, âgisme / Mistreatment of Older Adults, Ageism**

Articles portant sur la maltraitance touchant les personnes âgées, quelque soit sa forme (violence ou négligence). Incluant la maltraitance physique, sexuelle, psychologique ou financière, la violation des droits et l'âgisme.

Selected articles look at the various forms of mistreatment (physical, sexual, psychological or financial), as well as the violation of seniors' rights and ageism.

### Proches aidants / Caregivers

Les articles signalés ici portent sur les problématiques auxquelles doivent faire face les proches aidants qui accompagnent ou prennent en charge (en tout ou partie) les besoins d'une personne âgée et ce indépendamment de leurs liens familiaux. Ne sont pas retenus ici les articles portant sur les aidants professionnels (rémunérés) ou les bénévoles faisant partie d'une organisation reconnue (ex : Croix Rouge).

Selected articles examine the problems faced by caregivers who provide full or partial care to an older adult, irrespective of family ties. We do not include articles on professional (paid) caregivers or volunteers affiliated with an organization (e.g., the Red Cross).

## **Prévention-promotion santé vieillissement / Prevention and Health Promotion for Seniors**

Dans le cadre des travaux sur la prévention et la promotion de la santé sont référés spécifiquement les articles en lien avec l'activité physique, les activités cognitives, la prévention des chutes, et les habitudes de vie des personnes âgées vivant dans la communauté.

Selected articles support efforts to promote healthy living and prevent disease among seniors. Topics include physical activity, cognitive training, fall prevention and the lifestyle habits of seniors living in the community.

## Santé mentale / Mental Health

Cette section est consacrée aux articles en lien avec les personnes âgées souffrant de problèmes de santé mentale (Dépression majeure, schizophrénie, etc). Sont cités seulement occasionnellement des articles portant sur les personnes atteintes de démence (maladies neurodégénératives au sens du DSM V comme la maladie d'Alzheimer, etc.). Sont retenues plus particulièrement les études réalisées dans la communauté.

Selected articles focus on seniors suffering from mental health issues (major depression, schizophrenia, etc.). Most of the studies are carried out in the community. Only occasionally do we select articles on people affected by dementia (neurodegenerative diseases as defined by the DSM V, such as Alzheimer's, etc.).

### Soins palliatifs / Palliative Care

Sont signalés ici les articles portant sur les aspects psycho-sociaux liés aux soins palliatifs (Les articles purement bio-médicaux ne sont pas retenus). Aucun milieu n'est exclu, mais une attention particulière est apportée sur les soins à domicile et sur les problématiques liées au deuil.

Selected articles examine the psychosocial aspects of palliative care (purely biomedical articles are excluded). Although we include all care settings in our selection, we pay particular attention to home care and bereavement issues.
